

14th SILICON SAXONY DAY

June 18, 2019 / Conference Centre Airport Dresden

SENSA - Future Sensor Technologies Made in Saxony

SENSORS are the ultimate requirement for hidden gatherer and an essential part for any smart, artificial, intelligent, automated and autonomous system. Even if this session addresses the general topic SENSORS there will be a special focus on downscaling, intelligent sensors, sensor fusion, connected sensors, leading edge security and safety sensors as well as bio-sensors.

A special view is directed at cross-industry applications, field reports and transferability with a strong market orientation. Based on the needs and trends, the target markets aerospace, automotive, rail, mechanical engineering, health, agriculture and construction define the requirements for research, development and new technological concepts.

EXPERT SESSION

SESSION CHAIR

STEFAN UHLIG

Silicon Saxony / SenSa Innovationscluster Sensorik Sachsen
